DETAILED ACTION

Double Patenting

1. The nonstatutory double patenting rejection is based on a judicially created doctrine grounded in public policy (a policy reflected in the statute) so as to prevent the unjustified or improper timewise extension of the "right to exclude" granted by a patent and to prevent possible harassment by multiple assignees. See *In re Goodman*, 11 F.3d 1046, 29 USPQ2d 2010 (Fed. Cir. 1993); *In re Longi*, 759 F.2d 887, 225 USPQ 645 (Fed. Cir. 1985); *In re Van Ornum*, 686 F.2d 937, 214 USPQ 761 (CCPA 1982); *In re Vogel*, 422 F.2d 438, 164 USPQ 619 (CCPA 1970); and, *In re Thorington*, 418 F.2d 528, 163 USPQ 644 (CCPA 1969).

A timely filed terminal disclaimer in compliance with 37 CFR 1.321(c) may be used to overcome an actual or provisional rejection based on a nonstatutory double patenting ground provided the conflicting application or patent is shown to be commonly owned with this application. See 37 CFR 1.130(b).

Effective January 1, 1994, a registered attorney or agent of record may sign a terminal disclaimer. A terminal disclaimer signed by the assignee must fully comply with 37 CFR 3.73(b).

2. Claims 24-36 are rejected under the judicially created doctrine of obviousness-type double patenting as being unpatentable over claims 1-23 of U.S. Patent No.

6,670,935. Although the conflicting claims are not identical, they are not patentably distinct from each other because they claim the same subject matter of an LCD display having a timing control circuit; a gate circuit, a source driving circuit and a gray voltage generating circuit for generating a first gray voltage in a first interval of the gate clock signal and a second gray voltage in a second interval of the gate clock signal in response to a voltage level of the gate clock signal and a plurality of reference voltage obtained by dividing a power supply voltage to a predetermined ratio, the first gray

voltage having a magnitude greater than that of the second gray voltage(see claims 1-2 and 7).

Conclusion

3. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure.

Moon et al(5,945,970) teach an LCD display having a gray voltage generator(4); and a timing control circuit(1) coupled to a source driving circuit(3) and gate driving circuit(2).

.Yamada(6,844,867) teaches an LCD display a voltage generating circuit coupled to a timer(T2)(see figure 5).
